

NOME DEL PRODOTTO E BREVE DESCRIZIONE

Roll on/off compactor powered with renewable energy.

CARATTERISTICHE DELL'INNOVAZIONE

The innovation that distinguishes this compactor from others alike on the market consists in its energetic autonomy. It doesn't need to be linked with the public electrical power net (however it could be plugged in if necessary), nor it is dependent on fossil fuels for endothermic engines functioning.

In fact, it could be powered with any renewable energy power source (eolic, fotovoltaic, etc.), keeping the same speed and charge performances of a traditional equivalent model.

The whole works with a remarkable energy saving.

CAMPI DI APPLICAZIONE

Considering the energetic autonomy its main feature, this machine can be used anytime and anywhere there is a lack of traditional electric power source till now replaced by endothermic engines. Moreover, the possibility to save energy using renewable energy sources, makes this machine extremely useful both for economic advantage and environmental impact.
